

TankScan Global

The TankScan Global software is a web based solution allowing access to tank level data anywhere there is internet access. View accurate tank levels, send configuration updates, manage set points, receive text or email alarms, as well as view/graph data history-all from the comfort of your own desk. The data is sent to a cloud based data base by either Ethernet, cellular or satellite and can be shared with all levels of the distribution channel. TankScan Global is also available with an optional fleet management solution that allows for optimization for truck routes and ability to minimize the cost of delivery.

View critical tanks and locations on one screen.

Efficiently schedule deliveries to even remote customers.
