

Reliable Tank and Silo Level Monitoring Without Battery Maintenance

Scalable Monitoring. Smarter Operations.

The TankScan level monitoring panel is a 4G LTE cellular solution that provides real-time tank and silo level visibility without the need for battery maintenance. A wired sensor connects directly to the panel, providing reliable monitoring and remote access from anywhere an internet connection is available.

Built for flexibility and scalability, the level monitoring panel helps businesses optimize routes, reduce manual processes, and make smarter operational decisions.

Key

Wired Sensor Connectivity

- Supports a level sensor connected directly to the panel
- Eliminates battery-powered sensor maintenance
- Provides reliable, continuous tank and silo level monitoring

4G LTE Cellular Connectivity

- Provides remote access to tank level data anywhere an internet connection is available
- Enables monitoring through computer, tablet, or smartphone
- Supports reliable communication without requiring local network access

Durable, Expandable Hardware

- Weather-proof enclosure designed for demanding environments
- Scalable from one tank to hundreds of tanks
- Expand monitoring capabilities with remote IO panels or multiple main panels

Flexible Monitoring Options

- Optional local display for on-site level visibility
- Optional local alarms for immediate notification
- Optional pump permissive or interlock functionality for overfill protection

Optimize Your Operations with Better Data

The TankScan Level Monitoring Panel helps businesses move from reactive service to proactive planning.

Optimize Routes

Accurate tank data supports just-in-time collections and deliveries, helping improve route efficiency and reduce unnecessary trips.

Improve Efficiency

Reduce labor and transportation costs associated with manual tank measurements and routine site checks.

Support Growth

Add customers without adding more trucks or drivers by improving visibility and operational planning.

Improve Customer Service

Know when customers' tanks need service before they do, allowing teams to respond faster and more effectively.

TankScan Level Monitoring Panel Specifications

Connectivity	4G LTE Cellular
Sensor Connection	Wired level sensor
Enclosure	Durable weather-proof enclosure
Monitoring Access	Computer, tablet, or smartphone
Scalability	1 to hundreds of tanks with expansion capabilities
Expansion Options	Remote IO panels or multiple main panels
Optional Features	Local display, alarms, pump permissive/interlock for overfill protection
